Description of enhancements, corrections, and known problems:

This report lists the differences between CDOS 02.53 and CDOS 02.52.

CORRECTIONS TO VERSION 2.52

System calls 11 and 12 now return all directory entries even if the entries are deleted if there is a ? (3F) in the first byte of the FCB.

System calls 11 and 12 now return a number between 0 and 3 in the A register which represents the directory entry in the disk buffer. A -1 (FF) is returned in the A register when a directory entry can not be found.

KNOWN PROBLEMS

None
